Wescott Quality Fiberglass, Steel Reinforced

The Wescott Model T roadster is the finest reproduction body available. All the original body lines have been retained. All doors and deck lid come installed, and open and close solidly.

Wescott uses high quality, hand laminated fiberglass and extensive steel reinforcement to make a strong, straight and clean fitting body.

Doors

Stock or Hidden Hinges

The doors are fitted and mounted to the body with hinges, bear single jaw type latches and striker plates installed. Latches have lever arm to accept inside release knob on a stud. Note that Model T did not use outside door handles. Stock style door hinges or hidden hinges are available. Wescott hidden hinges are specially designed for our 1926 Roadster and only protrude minimally (about 1/4") inside of the door posts.

Dash

2 Dash Panel Options

A removable fiberglass dash panel is installed in the body.

1932 Filled Style

Auburn Style

Trunk Lid

The trunk lid is fitted and mounted to the body with the hinges, remote operated latch and cable, striker, and prop installed. All drip channels are installed on the body around the deck lid opening.

Seat

The seat back bulkhead is recessed 3" to allow extra seat spring depth without modifying the stock cockpit outline.

Firewall

Stock or Recessed Firewall

The firewall is molded using a fire retardant resin. The recessed style firewall is adjustable, allowing for different engines while keeping maximum leg room. The stock firewall should be considered on extended wheelbase cars to keep maximum leg room.

Stock Firewall

Recessed Firewall

Cowl

Filled Cowl or Working Vent

The Wescott 1926 Roadster body is available with a molded smooth cowl top or (at extra cost) a cowl vent. The cowl vent is fully working with the hinge, adjustment ratchet, and tension spring installed and the drip channel around the vent opening.
